BIORAPTOR[®]
Knotless Suture Anchor

No guesswork

Controllable tension for labral repairs of the hip

Unlike other labral anchors, the BIORAPTOR Knotless Suture Anchor is designed to allow the surgeon to determine final suture tension and tissue shift. The inner plug design locks the suture inside the anchor without dependence on the anchor bone interface for proper fixation.

Visit us at **Booth #107-108** to get a close up look at the BIORAPTOR Knotless Suture Anchor. For additional information contact your local sales representative, visit smith-nephew.com or call 978 749 1140.
